Lewis Bakeries:
A Fresche Legacy Quick Start Success Story

“...As a result of Fresche Legacy’s expertise in HP e3000 migration projects, they determined the type of training and tools specifically required for our transition to the HP 9000. Any question or technical issue that arose was met with a quick response from Fresche Legacy that allowed us to continue on track and on time with our migration schedule.”

- Dan Coyle, Vice President MIS, Lewis Bakeries

QUICK START IN MOTION
From the onset of their Quick Start Migration, Lewis Bakeries’ wanted to become knowledgeable in the migration process. The company’s goal was to have the necessary skill set that would allow their internal resources to complete their migration project on their own. Initially, the Quick Start Migration service provided by Fresche Legacy consisted of transitioning a specific COBOL application from an HP e3000 platform to the HP Integrity Server target platform, specifically the rx4640 Itanium server. The HP COBOL application was migrated to AcuCOBOL using Fresche Legacy’s AMXW migration tool. The Quick Start package also included the migration of a sample number of KSAM and flat files to Acucorp’s Vision file system & flat files. The quick start migration was successfully completed with Fresche Legacy experts providing migration process training on COBOL, UNIX and Eloquence to the staff at Lewis Bakeries. This training provided Lewis’ resources with the necessary skills and methodology needed for continued success in executing their platform migration.

ABOUT QUICK START
The Fresche Legacy Quick Start Migration service provides companies with a cost-effective and productive solution for migrating from one platform to another.

From the onset of the Quick Start Migration, a Fresche Legacy consultant is onsite to demonstrate how a physical migration of a specific application and a database from an HP e3000 platform to a target platform is performed.

Training of migration procedures are also provided to ensure a thorough knowledge transfer so further migration efforts can be executed seamlessly by the customer.

VALUE TO BUSINESS
Using Fresche Legacy’s AMXW (Automated Migration to UNIX or Windows) migration tool, Lewis Bakeries was able to complete its transition objectives on schedule within an aggressive timeframe. The custom migration training provided by Fresche Legacy’s migration consultant and Lewis Bakeries’ active involvement in the knowledge transfer and use of tools resulted in a successful migration project.

The Quick Start Migration is the ideal solution for migrating customers as it offers a risk free way of kick-starting migration efforts at a minimal cost.

The company’s goal was to have the necessary skill set that would allow their internal resources to complete their migration project on their own. Initially, the Quick Start Migration service provided by Fresche Legacy consisted of transitioning a specific application and database subset.

FRESCHER LEGACY’S PROFESSIONAL SERVICES TEAM

Freshe Legacy prides itself on providing exceptional technical professional services. We understand that migrating mission-critical applications and databases can be complex undertaking for any organization, especially when new technologies or unfamiliar development processes come into play. A large number of companies who have already completed migration projects can attest to the strength of Fresche Legacy’s team. You can rely on our technical expertise to ensure a successful, complete and rapid migration process.

WHAT IS INCLUDED:

Migration of a pre-determined application and database subset.

Migration techniques and knowledge transfer sessions educate IT staff on the ins and outs of the migration process that was applied to the application / database for the target environment.

Migration process documentation.

Tested application and databases in migrated platform environment with the customer as the primary tester and approval stakeholder.

BENEFITS

Affordable

Offers an easy method of evaluating the work required to complete the migration project

Allows IT staff to gain valuable insight into the migration best practices of our highly-skilled migration experts

Enables a risk-free approach to benchmarking the resulting transition platform - the resulting migrated application / databases could easily be tested for performance before a complete system migration needs to be tackled

OPTIONS

Supplementary formal education on solution software components as needed

Detailed analysis and planning of full-scale migration project

Onsite technical lead consulting to assist during subsequent migration projects – including implementing, supporting, maintaining, mentoring, training, and documenting.

Look Think Design Do Improve

THIS CASE STUDY HIGHLIGHTS THE:

“LOOK” step of our methodology, where we thoroughly examine your IT infrastructure from top to bottom, back to front and inside out.

“THINK” step of our methodology, where we strategically consider how your IT environment is performing, and should be performing.

“DESIGN” step of our methodology, where we employ our unique and innovative thought leadership capabilities to architect the future state of your IT infrastructure.

“DO” step of our methodology, where we complete the migration of your applications.
