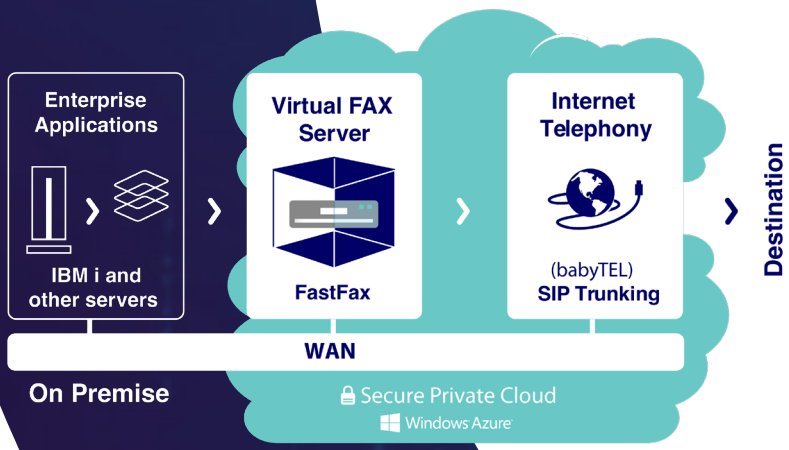
FRESCHE SOLUTIONS

FastFax

Move Your Fax (FoIP) to a Secure Cloud



Business Challenges

Many organizations are running their enterprise fax server on outdated hardware or unsupported operating systems that pose security risks. Virtualizing fax servers and moving them off-premise with a public or private cloud solution modernizes your infrastructure and reduces costs.

Public cloud fax services may seem like a reasonable and inexpensive option, but they don't provide the level of security, volume, flexibility, tracking or automation that enterprise applications require.

Improve efficiency by right-sizing your fax capacity

Reduce hardware and power consumption

Automate routing and eliminate manual effort

Integrate with any ERP application

Easily migrate IBM i fax server to the cloud

Centralize fax management, tracking and reporting

Retain control and security of an on-premise server, unlike public cloud fax

Maintain ownership of your fax numbers

Ensure full compliance and high availability

Manage faxes anywhere via secure VPN

FastFax: The Ultimate IBM i Fax Solution

FastFax VM elevates enterprise faxing for IBM i, offering a direct integration with your document-generating apps. This enables automatic fax sending, receiving, routing, archiving, and management—all secured within your network and without the need for on-premise hardware.

All-inclusive Subscription License: $850/month billed annually per LPAR. Each subscription includes 2 channels (Virtual Machine), full access to all features and modules: PDF conversion, eDocMail and Extractor.

Why FastFax?

> Choosing FastFax was one of the best decisions we have made all year, the solution is flawless. We are saving money on long distance and international charges
