HOW X-MODERNIZE AI HELPS

Convert Whole Applications, Not Snippets

APPLICATION INTELLIGENCE

Context Before Conversion

Fresche X-Analysis AI maps programs, dependencies, data models, and screen flows first, so each conversion understands how your application fits together.

AGENTIC AI CONVERSION

Specialized AI Agents

AI agents plan, convert, test, and correct each application slice, using the best-fit model for every task, for consistent output at scale.

BUILT-IN TESTING

Testing Built Into Every Run

Auto-generated unit tests find and correct errors during conversion, so your team starts review from cleaner, more consistent Java.

COST PREVIEW

See the Cost Before You Convert

X-Modernize AI estimates lines of code and cost for each slice before you submit, so every phase fits the budget you set.

> *"The logic all looks fine, because it even tells you this is the logic from this subroutine. So it's easy for us to compare against what it was."*

HOW IT WORKS

~1 hr

OF ONBOARDING

“Oh, Okay, This Is Simple”

Heather M., Software Developer at Fareway, on her first conversion. Her small IT team converted sales and warehouse programs from RPG to Java, and after about an hour of onboarding, two in-house developers were running conversions on their own.
