

Are you worried about the future of PowerHouse?

When it's time to make the shift, save money and significantly improve integration and agility throughout your organization with Fresche Solutions PowerHouse alternatives.

Fresche Solutions Offers Modern PowerHouse Alternatives

For years you have relied on PowerHouse as a stable, flexible development language, but there are now a number of questions about its future:

Support for PowerHouse: What level of support is available for PowerHouse now? And in three to five years? Can you risk running unsupported applications, even for a brief period?

Lack of skilled resources: Can you count on finding enough reasonably-priced, skilled resources in the future to maintain your legacy PowerHouse code? These resources are dwindling, and are typically pricey.

Cost: Do your PowerHouse systems run on older platforms that are now costly to maintain? Specialized technology usually means higher cost. New technology normally brings lower licensing and maintenance costs.

Integration with modern IT systems: How easily can you integrate your older PowerHouse systems with modern technologies, now and in the future? It isn't always easy to make older systems talk to modern ones.

Fresche Solutions provides three alternatives:

If you wish to modernize your PowerHouse, Fresche Solutions offers a complete language conversion to Java or .NET. However, if you feel that the language still meets your needs, Fresche can instead perform a low-cost migration to more modern platforms such as UNIX, Linux or Windows. We have the tools, methodology and deep expertise for the option that meets your needs. We also have the support resources to help you backfill IT needs during and post modernization.

Conversion to Java or .NET

PowerHouse

Fresche smoothly moves you to an updated system using specifically-engineered software tools that automate the conversion of PowerHouse 4GL environments to native Java or .NET. When combined with our skilled solution architects, project managers and migration team, you get a low-risk and complete PowerHouse-to-Java or .NET application modernization.

PowerHouse Support

PowerHouse

Fresche's support department has extensive experience with all 4GLs and their surrounding environments. We provide all support and development activities, often with a gradual program to return a modernized system to the client after a multi-year engagement. Fresche resources are also expert at the business processes supported by PowerHouse.

PowerHouse rehosting

PowerHouse

Fresche has developed a proven platform migration methodology and has created a code analysis and migration toolset to plan a platform migration project and automate the conversion. Our consultants have the experience and the training to perform lift-and-shift migrations that reproduce all PowerHouse functionality on the destination platform.

How we help you get started:

Fresche Solutions guides customers in developing a plan that meets their needs and objectives. We can perform high-level assessments as well as detailed modernization analyses that provide comprehensive information regarding technology options, planning and budget. Fresche can also provide as much or as little support as needed with a variety of project models ranging from do-it-yourself models right up to fully outsourced projects.

About PowerHouse Modernization

In most cases, a PowerHouse application environment is not simply a collection of PowerHouse 4GL code programs. These programs are normally surrounded by a number of OS-specific references and JCL code that interacts with PowerHouse utilities.

In addition, they often interact with third-party software such as job schedulers, print management tools or other programming languages such as COBOL. Fresche's solution and experienced consultants address all of these issues.

Our Expertise

Trained by Cognos, Fresche consultants complement their knowledge with Fresche's own PowerHouse migration tools and methodologies based on our experience re-hosting large and complex PowerHouse applications to other platforms such as UNIX, Linux and Windows.

Fresche has unique expertise resolving the challenges of PowerHouse co-existing with third-party utilities and other languages such as COBOL.

About Fresche Solutions

Fresche helps IBM i customers meet all of their challenges. As a leading expert in IBM i, we provide products and services that span the complete IBM i application modernization and management spectrum. We enable IT with modernization strategies to support business and improve financial performance, increase market competitiveness, remove risk and add business value. With the widest solution portfolio in the IBM i marketplace and 100% referenceability, our team of experts helps organizations future-proof their business by modernizing business processes, technologies and applications. Companies running RPG, COBOL, CA 2E SYNON and Java applications rely on us for comprehensive, automated solutions that optimize IBM i systems and help take advantage of technologies such as Web, Mobile, Cloud and RPGOA on IBM i.
